

Here are the topics that are covered in ENSE 271 courses, that we have incorporated into low-fidelity prototype:

- In our prototype we have kept the header and the navigation section the same as SSCF website has, which maintains uniform navigation across the web-site.
- We have incorporated a search bar and navigation button, which enhances the usability of the site, as users can easily and efficiently locate the desired information.
- We have included a signifier button on the website's homepage navigation bar, which can guide users to the appropriate sections of the site. The button serves as a visual cue to help users quickly identify where they need to go, and once clicked, it directs them to the desired section.
- By using a signifier button, we aim to improve the user experience by reducing the cognitive load required to navigate the site and helping users find the information they need more efficiently.
